## 1.Introduction

Let $\mathrm{G}=(\mathrm{V}, \mathrm{E})$ be a connected graph, without multiple edges or loops. For any abelian group A (written additively) .Let $A^{*}=A-\{0\}$.A function $f: E(G) \rightarrow A^{*}$ is called a labeling of $G$. Any labeling induces a map $f^{+}: V(G) \rightarrow A$, defined by $\mathrm{f}^{+}(\mathrm{v})=\sum f(u, v)$ where $u, v \in E(G)$.If there exists a labeling f which induces a distinct label c on $\mathrm{V}(\mathrm{G})$, we say that f is an spectrum of distinct magic labeling and that $G$ is an distinct congruence magic graph.We denote by $\mathrm{Z}_{\mathrm{n}}$ the group of integers $(\bmod n)$.In this paper , we are interested in determining for which values of $k \geq 3$ a graph is DC-magic. The set $\{\mathrm{k}$ : G is $\mathrm{Z}_{\mathrm{n}}$-magic, $\mathrm{n} \geq 3$ \}is called the Distinct-Congruent spectrum of a graph $G$ and is denoted by DC (G).In this paper,weexamine,the DC-magic spectra of class of graphs.

## 2.Definition

Let $\mathrm{G}=(\mathrm{V}, \mathrm{E})$ be a connected graph, without multiple edges or loops. For any abelian group A (written additively) .Let $A^{*}=A-\{0\} . A$ function $f: E(G) \rightarrow A^{*}$ is called a labeling of $G$. Any labeling induces a map $f^{+}: V(G) \rightarrow A$, defined by $\mathrm{f}^{+}(\mathrm{v})=\sum f(u, v)$ where $u, v \in \mathrm{E}(\mathrm{G})$.If there exists a labeling f which induces a distinct label c on $\mathrm{V}(\mathrm{G})$, we say that f is an spectrum of distinct magic labeling and that G is an distinct-congruence magic graph.

In the first example the distinct congruence magic spectrum is $\mathrm{Z}_{3}$ where as in the second $\mathrm{DC}[\mathrm{G}]=\mathrm{Z}_{7}$

## 3.Some observations

## Theorem 3.1

The odd cycle of order $n$ whose distinct congruence magic spectrum is $Z_{n}$ for all $n \geq 3$

## Proof

Claim The cycle $\mathrm{C}_{\mathrm{n}}, \mathrm{n}$ is odd has $\mathrm{DC} \mathrm{Z}_{\mathrm{n}}$

## Construction

Label all the edges by $1,2, \ldots . n$ clockwise simultaneously. The sum at each vertex is distinct,they are $0,1,2, \ldots n-$ 1.Therefore $\mathrm{DC}\left[\mathrm{C}_{\mathrm{n}}\right]=\mathrm{Z}_{\mathrm{n}}$

## Verification

Let $\mathrm{V}\left(\mathrm{C}_{\mathrm{n}}\right)=\left\{\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots . . \mathrm{v}_{\mathrm{n}}\right\}$
$\mathrm{E}\left(\mathrm{C}_{\mathrm{n}}\right)=\left\{\mathrm{v}_{\mathrm{i}} \mathrm{V}_{\mathrm{i}+1} / 1 \leq i \leq \mathrm{n}\right\}, \mathrm{v}_{\mathrm{i}+1}=\mathrm{v}_{1}$
Define f on $\mathrm{E}\left(\mathrm{C}_{\mathrm{n}}\right)$ by $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{i}, 1 \leq i \leq \mathrm{n}-1$, then the induced vertex labeling $\mathrm{f}^{+}$on $\mathrm{V}\left(\mathrm{C}_{\mathrm{n}}\right)$ by
$\mathrm{f}^{+}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)+\mathrm{f}\left(\mathrm{v}_{\mathrm{i}-1} \mathrm{v}_{\mathrm{i}}\right)(\bmod \mathrm{n})$
$=\mathrm{i}+\mathrm{i}-1(\bmod \mathrm{n})$
$=2 \mathrm{i}-1(\bmod \mathrm{n})$

Therefore $\mathrm{f}^{+}\left(\mathrm{v}_{\mathrm{i}}\right)=2 \mathrm{i}-1(\bmod \mathrm{n})$ for all $\mathrm{v}_{\mathrm{i}} \in \mathrm{V}\left(\mathrm{C}_{\mathrm{n}}\right)$

## Theorem 3.2

The star graph whose distinct congruence magic spectrum is $\mathrm{Z}_{\mathrm{n}}$ for all $\mathrm{n} \geq 3$

## Proof

ClaimThe star $\mathrm{S}_{\mathrm{n}}, \mathrm{n}$ is odd has $\mathrm{DC} \mathrm{Z}_{\mathrm{n}}$

## Construction

Label the pendant edges by $1,2, \ldots \ldots . n-1$, The sum at each vertex is corresponding to the edges $1,2, \ldots . . n-1$ respectively.Thecentre vertex whose sum is zero

## Verification

Let $\mathrm{V}\left(\mathrm{C}_{\mathrm{n}}\right)=\left\{\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots . . \mathrm{v}_{\mathrm{n}}\right\}$
$\mathrm{E}\left(\mathrm{C}_{\mathrm{n}}\right)=\left\{\mathrm{v}_{\mathrm{n}} \mathrm{V}_{\mathrm{i}} / 1 \leq i \leq \mathrm{n}-1\right\}$
Define f on $\mathrm{E}\left(\mathrm{C}_{\mathrm{n}}\right)$ by $\mathrm{f}\left(\mathrm{v}_{\mathrm{n}} \mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}, 1 \leq i \leq \mathrm{n}-1$, then the induced vertex labeling $\mathrm{f}^{+}$on $\mathrm{V}\left(\mathrm{C}_{\mathrm{n}}\right)$ by
$\mathrm{f}^{+}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{v}_{\mathrm{n}} \mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}, 1 \leq i \leq \mathrm{n}-1 ; \mathrm{f}^{+}\left(\mathrm{v}_{\mathrm{n}}\right)=\sum_{i=1}^{n-1} f\left(\mathrm{v}_{\mathrm{n}} \mathrm{v}_{\mathrm{i}}\right)=1+2+\ldots \ldots+\mathrm{n}-1$

$$
\begin{aligned}
& =\frac{(n-1) n}{2}(\bmod n) \\
& \equiv 0(\bmod n)
\end{aligned}
$$

## Theorem 3.3

The path graph whose distinct congruence magic spectrum is $Z_{n}$ for all $n \geq 3, n$ is odd.

## Proof

ClaimThe path $\mathrm{P}_{\mathrm{n}}, \mathrm{n}$ is odd has $\mathrm{DC} \mathrm{Z}_{\mathrm{n}}$

## Construction

Label all the edges of path by $1,2,3, \ldots . . n$,the sum at each vertex is distinct,such as $0,1,2,3, \ldots . . n-1$. Therefore $D C\left[P_{n}\right]=Z_{n}$

## Verification

$$
\mathrm{f}\left(\mathrm{v}_{1}, \mathrm{v}_{2}\right)=1 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{n}-1}, \mathrm{v}_{\mathrm{n}}\right)=\mathrm{n}-1 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}, \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{i}, 1 \leq i \leq n-1 .
$$

The sum at each vertex is $f^{+}\left(v_{1}\right)=1, f^{+}\left(v_{i}\right)=f\left(v_{i}, v_{i+1}\right)+f\left(v_{i-1}, v_{i}\right)$

$$
\begin{aligned}
& =\mathrm{i}+\mathrm{i}-1 \\
& =2 \mathrm{i}-1,(\bmod \mathrm{n}) \quad 1 \leq i \leq n-1 \\
\mathrm{f}^{+}\left(\mathrm{v}_{\mathrm{n}}\right) & =\mathrm{n}-1
\end{aligned}
$$

## Theorem 3.4

The cycle attached with star graph that is $\mathrm{DC}\left(\mathrm{C}_{4} @ \mathrm{~S}_{\mathrm{n}}\right)=\mathrm{Z}_{\mathrm{n}}$ where n is odd

## Proof

Claim The graph $\mathrm{C}_{4} @ \mathrm{~S}_{\mathrm{n}}$ has distinct magic spectrum.

## Construction

Label the cycle edges by $1, \mathrm{n}, 2, \mathrm{n}-1$ and star edges by $3,4,5, \ldots . . \mathrm{n}-2$ in the clockwise direction.

## Verification

$\mathrm{V}(\mathrm{G})=\left\{\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots . . \mathrm{v}_{\mathrm{n}}\right\}$

$f\left(v_{7} v_{8}\right)=1, f\left(v_{8} v_{1}\right)=10, f\left(v_{5} v_{9}\right)=4, f\left(v_{5} v_{10}\right)=5, f\left(v_{5} v_{11}\right)=6$,
$f\left(\mathrm{v}_{5} \mathrm{v}_{12}\right)=7, \mathrm{f}\left(\mathrm{v}_{5} \mathrm{v}_{13}\right)=8$
$\mathrm{f}^{+}\left(\mathrm{v}_{1}\right)=12, \mathrm{f}^{+}\left(\mathrm{v}_{2}\right)=13, \mathrm{f}^{+}\left(\mathrm{v}_{3}\right)=14, \mathrm{f}^{+}\left(\mathrm{v}_{4}\right)=15$,
$\mathrm{f}^{+}\left(\mathrm{v}_{5}\right)=55, \mathrm{f}^{+}\left(\mathrm{v}_{6}\right)=22, \mathrm{f}^{+}\left(\mathrm{v}_{7}\right)=10, \mathrm{f}^{+}\left(\mathrm{v}_{8}\right)=11$

$\mathrm{f}^{+}\left(\mathrm{v}_{9}\right)=4, \mathrm{f}^{+}\left(\mathrm{v}_{10}\right)=5, \mathrm{f}^{+}\left(\mathrm{v}_{11}\right)=6, \mathrm{f}^{+}\left(\mathrm{v}_{12}\right)=7$
$\mathrm{f}^{+}\left(\mathrm{v}_{13}\right)=8$
Therefore all are distinct

## Congruency:-

$12 \equiv \underline{\mathbf{1 2}}(\bmod 13)$
$13 \equiv \underline{\mathbf{0}}(\bmod 13)$
$14 \equiv \underline{\mathbf{1}}(\bmod 13)$
$15 \equiv \underline{\mathbf{2}}(\bmod 13)$
$55 \equiv \underline{\mathbf{3}}(\bmod 13)$
$22 \equiv \underline{9}(\bmod 13)$
$10 \equiv \underline{10}(\bmod 13)$
$11 \equiv \underline{\mathbf{1 1}}(\bmod 13)$
$4 \equiv \underline{4}(\bmod 13)$
$5 \equiv \underline{\mathbf{5}}(\bmod 13)$
$6 \equiv \underline{\mathbf{6}}(\bmod 13)$
$7 \equiv \underline{\mathbf{7}}(\bmod 13)$
$8 \equiv \underline{\mathbf{8}}(\bmod 13)$
Therefore the sum at each vertex is distinct. Therefore $\mathrm{DC}\left(\mathrm{C}_{8} @ \mathrm{~S}_{\mathrm{n}}\right)=\mathrm{Z}_{\mathrm{n}}$ where n is odd.

## Theorem 3.8

The conjecture that the even cycle $\mathrm{C}_{2 \mathrm{n}} @ \mathrm{~S}_{\mathrm{n}}$ whose distinct magic spectrum is $\mathrm{Z}_{\mathrm{n}}$.

## Conclusion

The graphs whose distinct magic spectrum is $\mathrm{Z}_{\mathrm{n}}$. More general graphs like stars ,cycles,paths,etc., are also discussed.Main applications of this labeling is network theory, coding theory, etc. The conjecture that the even cycle $\mathrm{C}_{2 \mathrm{n}}$ attached with stars whose distinct magic spectrum is $\mathrm{Z}_{\mathrm{n}}$.
